Project

Personal Portfolio

February 2024

I built a personal portfolio from the header to the footer using my skills in HTML, CSS, and JavaScript.

Issue: The biggest issue I had during the project was to connect my HTML form with my Google sheet using Apps Script and JavaScript.

BMR Calculator

April 2024

I wanted to create a project where I would need to use a lot of logic and JavaScript to build, so I decided to build something around one of my hobbies - Fitness.

Issue: One of the biggest parts of my code was bugging at a certain point which made all of my code not work anymore, all the results were wrong. I could have spent less time debugging it if I had known about Git, so I decided to learn it afterward.

Education

College Rosemont, Montreal — *Computer Science*

January 2024 - Present

During my cursing I will develop and learn about : Python, Java, JavaScript, HTML, PHP, SQL, Linux, Bash, Windows OS, MacOS, and much more

University of Maryland, Coursera— *Cybersecurity*

January 2024

I learned the basics of Cybersecurity and the different types of ways hackers use nowadays to hack systems.

Skills

- JavaScript
- Python
- HTML
- CSS
- Git

LANGUAGE

- French
- English

Career Objective/Interest

- Software engineer
- Embedded software engineer
- Blockchain developer
